

DRIVING OCCUPATIONAL THERAPY SERVICES

What's Driving You?

We help people drive safely & legally following a medical illness or injury

DRIVING OCCUPATIONAL THERAPY SERVICES

For active, safe and independent living

This specialty service aims to help people begin or return to driving safely & legally following a medical illness or injury which may have affected their ability to drive.

Our therapists will perform a comprehensive assessment to determine:

- How a person's medical condition might impact on their ability to drive safely.
- Assess a person's ability to drive a vehicle (physical & cognitive capacity).
- Recommend appropriate vehicle modifications & provide training in their use.
- Assess work related driving capacity.
- Assess correct ergonomic vehicle positioning.
- Help an individual with an acquired or congenital disability begin driving.
- Help identify alternative transport options to ensure the individual can access the community and maintain his/her independence.

Assessments are conducted by Occupational Therapists who have completed a nationally recognised post-graduate driver training qualification and are registered with the WA Board of Occupational Therapy.
